Welcome from the IETF Chair

Welcome to IETF 81 in Quebec City! I'm looking forward to collaborating with many talented and enthusiastic people during the week.

Please extend your thanks to our meeting host: Research In Motion (RIM). I am told that the social event at the Musée de la Civilisation on Tuesday evening will be quite wonderful. In addition, .ca and Comcast are sponsoring parts of the meeting, and Bell and Telus are providing the network connectivity. If you see someone with a green dot on their badge, please thank them.

The Nominations Committee (NomCom) is just getting started for leadership positions that start in March 2012. If you have thoughts about potential IAB, IESG, and IAOC members, please talk to someone with an orange dot.

First-time attendees have a "New Attendee" badge banner. Please welcome the newcomers and answer their questions about the IETF culture.

Depletion of the IANA IPv4 address pool last February has not resulted in a meltdown of the Internet. It has not created a crisis. However, there is a need for action. Please help everyone implement dual stack to support both IPv4 and IPv6. Some people demonstrated that IPv6 can be quite successful on *World IPv6 Day* on 8 June 2011. This event was a rigorous 24-hour global test flight of coexisting IPv4 and IPv6 services in the Internet. The IETF web site has supported IPv6 for many years, and it was part of this event. Learn more about what happened, and what did not happen, at:

<http://www.internetsociety.org/worldipv6day/>

I look forward to your participation this week, and I look forward to seeing you at IETF 82 in Taipei, Taiwan on 13-18 November 2011.

Thanks for all you do for the Internet!

Note Well

Any submission to the IETF intended by the Contributor for publication as all or part of an IETF Internet-Draft or RFC and any statement made within the context of an IETF activity is considered an "IETF Contribution". Such statements include oral statements in IETF sessions, as well as written and electronic communications made at any time or place, which are addressed to:

- The IETF plenary session
- The IESG, or any member thereof on behalf of the IESG
- Any IETF mailing list, including the IETF list itself, any working group or design team list, or any other list functioning under IETF auspices
- Any IETF working group or portion thereof
- Any Birds of a Feather (BOF) session
- The IAB or any member thereof on behalf of the IAB
- The RFC Editor or the Internet-Drafts function
-

All IETF Contributions are subject to the rules of [RFC 5378](#) and [RFC 3979](#) (updated by [RFC 4879](#)).

Statements made outside of an IETF session, mailing list or other function, that are clearly not intended to be input to an IETF activity, group or function, are not IETF Contributions in the context of this notice.

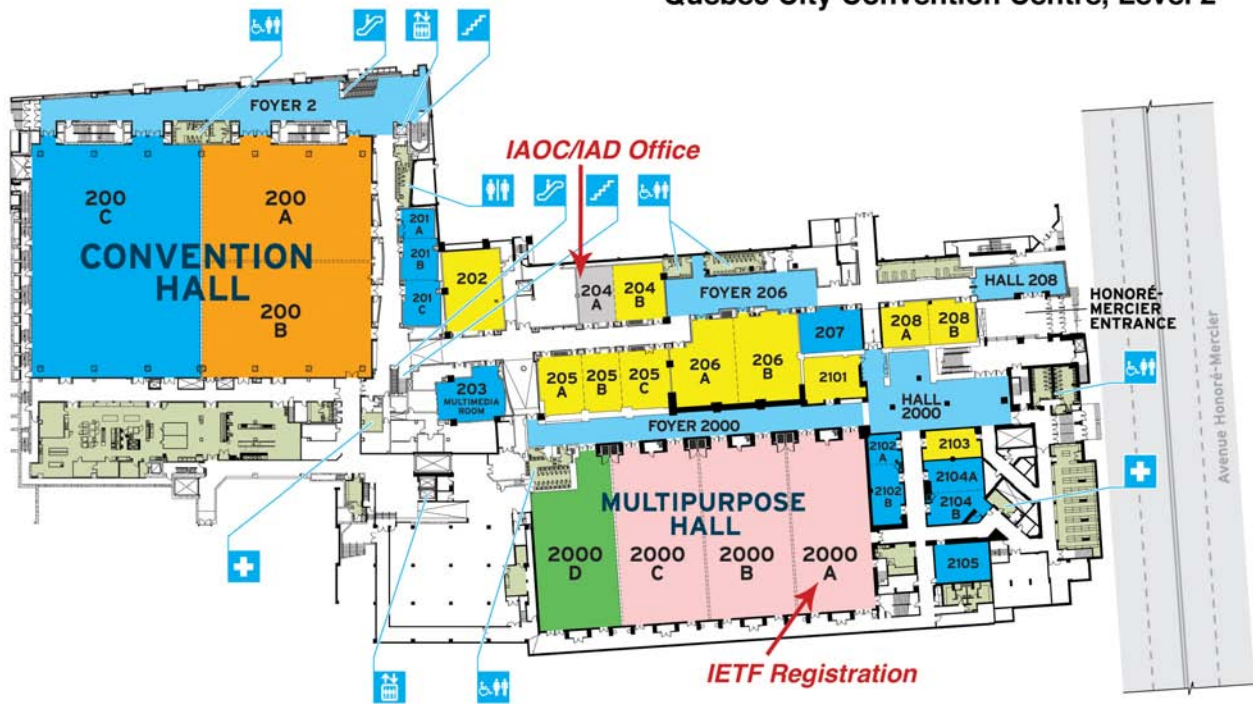

Please consult [RFC 5378](#) and [RFC 3979](#) for details.

A participant in any IETF activity is deemed to accept all IETF rules of process, as documented in Best Current Practices RFCs and IESG Statements.

A participant in any IETF activity acknowledges that written, audio and video records of meetings may be made and may be available to the public.

3. IAB Chair's Report - Bernard Aboba
4. RSOC Report - Fred Baker

1700 - 1745

Technical Session I: "Report from World IPv6 Day"

Moderators: Fred Baker and Leslie Daigle

On 8 June, major websites and major content delivery networks joined together for the first global-scale trial of IPv6. In this session, panelists will explore the lessons from this important event.

1745 - 1915

Technical Session II: "The Web Privacy Tussle"

Panel session moderated by Alissa Cooper

Speakers:

- Jens Grossklags (Pennsylvania State University)
- Fred Carter (Office of the Information and Privacy Commissioner, Ontario, Canada)
- Andy Zeigler (Microsoft)

Designers of Internet protocols, services, and applications are increasingly being confronted with challenges associated with protecting the privacy of individual Internet users. Past efforts to build privacy features into Internet standards have met with mixed results, while attempts to fully comprehend and document the privacy consequences of Internet protocols more broadly remain in a nascent stage.

The web platform in particular has become an arena where privacy issues are emerging with increasing frequency. This plenary will explore the web privacy "tussle" by providing a diversity of perspectives on the tensions and motivations behind some of the privacy struggles that are currently exhibiting themselves on the web. By examining past attempts at addressing privacy issues within Internet standards and technologies, the panel provides an opportunity for the IETF community to better understand the aspects of privacy that are relevant to protocol design and the appropriate scope of privacy work in the IETF.
