

I E T F[®]

APN BoF

Date: Friday, July 30, 2021

Time: 12:00-14:00 Session I

Webpage:

<https://datatracker.ietf.org/group/apn/about/>
<https://github.com/APN-Community>

Chairs:

Adrian Farrel <adrian@olddog.co.uk>

Bob Hinden <bob.hinden@gmail.com>

Daniel Voyer <daniel.voyer@bell.ca>

Description:

Application-aware Networking (APN) is a framework, where an APN attribute is introduced at network edge devices and is carried along with the tunnel encapsulation for packets traversing an APN domain in order to facilitate service provisioning, perform fine-granularity traffic steering, and network resource adjustment.

This WG-Forming BoF will discuss the motivation of the work, the principle use cases, gap analysis of existing technologies, and the work items to be covered in the potential WG.

You are very welcomed to attend this BoF and join the discussions.
