Dear colleagues,

OPEN NETWORKING  
FOUNDATION

Thank you for the liaisons back from some of you to our previous distribution of the Information Modeling work in progress. We appreciate your interest and input on the collaboration in the specification of an industry-wide open common information model.

Since our last liaison where we informed you on the availability of Version 1.0, ONF has now approved and published Version 1.1 on the ONF Technical Library site <https://www.opennetworking.org/sdn-resources/technical-library> for public access:

-  [Core Information Model \(CoreModel\) 1.1 + Model 1.1](#) (November 2015 | TR-512)
-  [Common Information Model \(CIM\) Overview 1.1](#) (November 2015 | TR-513)
-  [UML Modeling Guidelines 1.1](#) (November 2015 | TR-514)
-  [Papyrus Guidelines 1.1](#) (November 2015 | TR-515)

We are looking forward to your review and feedback for further collaboration.

Notes:

The information model is developed using the open source UML tool Papyrus. The instruction on how to obtain the Papyrus tool and view the model is described in the Papyrus Guidelines (  [Papyrus Guidelines 1.1](#), TR-515).

Additional UML artifact properties are defined in the Open Model Profile which lay the foundation for a harmonized development of UML models in different SDOs. The profile files are attached as part of the model files ([Model 1.1](#), TR-512).

Model Sketches and Spec Model thoughts are also included in the [Model 1.1](#) files to assist in the understanding of the information model.

Sincerely,

Kam LAM, Co-Chair Information Modeling Project  
Nigel Davis, Co-Chair Information Modeling Project
