

Setting the Configuration Knob (Assuming ENCAPS=20)

- **1280: safest option**
- **1280 – ~1380: probably safe for most paths**
- **1380 – 1480: safe only if little/no additional encaps**
- **1480 – 1500: only safe if path has larger-than-1500 MTU and TFE has larger-than-minimum EMTU_R**
- **optimizing down to the byte level not always possible**
